AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A process for manufacturing and filling flexible pouches, the process comprising:

blow molding a preform having a neck portion into a flexible pouch having a neck portion;

filling said flexible pouch with a desired product;

closing or capping the filled pouch; and

placing the filled pouch in a rigid container;

wherein the neck portion of the preform and pouch are used to handle the preform and pouch throughout the process;

and wherein the pouch is not self-supportive.

- 2. (Original) The process of Claim 1 wherein said process further comprises decorating and/or dressing the pouch.
- 3. (Original) The process of Claim 2 wherein said pouch is filled prior to decorating and/or dressing of the pouch.
 - 4. (Canceled)
 - 5. (Canceled)
 - 6. (Original) The process of Claim 1 wherein said rigid container is a box.
 - 7. (Original) The process of Claim 1 wherein said pouch has at least one layer.
- 8. (Original) The process of Claim 7 wherein at least one layer comprises polyethylene terephthalate or polypropylene.
- 9. (Original) The process of Claim 1 wherein said pouch has one or more exterior layers comprising a material selected from the group consisting of polyethylene, polypropylene, modified polyolefins, modified elastomers, polystyrene, thermoplastic polyurethane, copolyester barrier materials, phenoxy-type thermoplastics, polyamides, polyethylene naphthalate, polyethylene naphthalate copolymers, polyethylene naphthalate/polyethylene terephthalate blends, polyethylene terephthalate, compatibilized polymer blends, and combinations thereof.
- 10. (Currently Amended) An apparatus for making and filling flexible pouches comprising:

a handling system that conveys preforms and/or flexible pouches through a manufacturing and filling system; and

a manufacturing system comprising a blow molding machine;

a filling system comprising:

a filling machine; and

a closing or capping machine;

wherein the handling system conveys the preforms and flexible pouches throughout the manufacturing and filling systems by the neck portion and releases the neck portion thereafter; and

wherein the handling system places the flexible pouches in a rigid container.

- 11. (Original) The apparatus of Claim 10 wherein said blow molding machine blow molds a preform with a neck into a flexible pouch having a neck.
- 12. (Original) The apparatus of Claim 10 wherein said filling machine fills a flexible pouch with a desired product.
- 13. (Original) The apparatus of Claim 10 wherein said closing or capping machine closes a filled flexible pouch.
- 14. (Original) The apparatus of Claim 10 wherein said apparatus further comprises a system which decorates and/or dresses the flexible pouch.
- 15. (Original) The apparatus of Claim 14 wherein said system which decorates and/or dresses the pouch is placed before the filling system.
- 16. (Original) The apparatus of Claim 10 wherein said apparatus further comprises a system which places the flexible pouch into a rigid container.
- 17. (Original) The apparatus of Claim 16 wherein said system which places the flexible pouch into a rigid container is placed before the filling system.
 - 18. (Original) The apparatus of Claim 16 wherein said rigid container is a box.
 - 19. (Original) The apparatus of Claim 10 wherein said pouch has at least one layer.
- 20. (Original) The apparatus of Claim 19 wherein at least one layer comprises polyethylene terephthalate or polypropylene.
- 21. (Original) The apparatus of Claim 10 wherein said pouch has one or more exterior layers comprising a material selected from the group consisting of polyethylene, polypropylene,

modified polyolefins, modified elastomers, polystyrene, thermoplastic polyurethane, copolyester barrier materials, phenoxy-type thermoplastics, polyamides, polyethylene naphthalate, polyethylene naphthalate copolymers, polyethylene naphthalate/polyethylene terephthalate blends, polyethylene terephthalate, compatibilized polymer blends, and combinations thereof.

22. (Currently Amended) A process for manufacturing and filling flexible pouches, the process comprising:

placing a preform having a neck portion into a handling system;

blow molding the preform into a flexible pouch that is not self-supportive;

filling the flexible pouch with a desired product;

closing or capping the filled pouch;

placing the pouch in a rigid container; and

releasing the preform from the preform handling system

wherein the handling system handles the preform and pouch by the neck portion throughout the process.

- 23. (Previously Presented) The process of Claim 22 wherein said process further comprises decorating and/or dressing the pouch.
- 24. (Previously Presented) The process of Claim 23 wherein said pouch is filled prior to decorating and/or dressing of the pouch.
 - 25. (Canceled).
- 26. (Previously Presented) The process of Claim 25 wherein said pouch is filled prior to placing the pouch in a rigid container.
- 27. (Previously Presented) The process of Claim 26 wherein said rigid container is a box.
- 28. (Previously Presented) The process of Claim 22 wherein said pouch comprises at least one layer.
- 29. (Previously Presented) The process of Claim 28 wherein at least one layer comprises polyethylene terephthalate or polypropylene.
- 30. (Previously Presented) The process of Claim 22 wherein said pouch has one or more exterior layers comprising a material selected from the group consisting of polyethylene, polypropylene, modified polyolefins, modified elastomers, polystyrene, thermoplastic
